

Oakworks ~ Marina Wet Table with Aquaduct

Item# OW1026

Description:

The Marina is the ultimate solution for your wet table environment, accommodating a variety of heating elements and featuring the Aqueduct recessed water collection system.

Features:

The aqueduct is recessed to minimize discomfort for clients and practitioners, but is designed to capture almost all the water and materials used in treatments and direct them to a drain to minimize slip hazards and continuous exposure to technicians. More comfortable than most spa tables, the Marina offers a 3" thick plush top with built in recess for a hot water bag that warms the torso and insures clients will stay warm and comfortable. In addition to superior comfort, the Marina's battery powered lift system, stainless steel construction and beautiful solid mahogany accents give it all of the strength, beauty and convenience that you would expect from an Oakworks Spa Table. Battery operated table comes with UL listed battery charger.
